We provide the **UK's first real-time tracking** down to container and carton level.

**Real time tracking** gives early visibility of delayed deliveries and provides the resilience to handle unexpected events.

Online collaboration tools, automatic updates and powerful reporting **improves productivity and lowers inventory costs.**

Our smart logistics portal makes transparent the complex process of customs clearance, transfers between sea, road and rail, and all other physical, procedural and bureaucratic hold-ups. The smart portal ensures paperwork keeps up with the goods and the goods are delivered as swiftly as possible.

# Smart logistics features

## Real-time tracking

Our smart logistics portal delivers real-time visual tracking at carton and container level. Position data from a vessel's AIS transponder is downloaded to our smart portal from satellites in low-orbit. This is matched with ship or plane manifests so you can track individual containers or cartons on the vessel actually carrying your cargo – not the vessel that the operator says it was originally booked on. This real-time tracking of vessels and individual cartons is a first for a UK forwarder, and extends our ability to track cartons once unloaded from ship or plane.

## Real-time collaboration

The smart portal automatically notifies you when there is a shipment update or clearance documentation is required. This reduces delays in taking action and keeping everyone informed. Controlled access can be granted to

your logistics partners ensuring that everyone can act on real time information.

## Accurate forecasts of ETA

Accurate and independent forecasts of ETA are automatically sent to our smart logistics portal, which if different from the current ETA generate automatic alerts. The data provide much more accuracy than that provided by the shipping line.

## Delivery timeline

Intuitive graphical displays for each consignment are generated for each segment of a journey by road, rail and ocean, giving greater visibility on goods in transit.

## Delivery scheduler

Once a consignment has arrived and cleared customs, the smart logistics portal immediately notifies you to arrange delivery to its final destination.

## Dashboard

A dashboard summarises your notifications and alerts. This allows you to take timely actions and minimises any supply chain disruptions.

## Purchase order management

Our smart portal combines supply chain data and provides visibility of all purchase orders and the ability to create and manage shipments.

## Powerful reporting

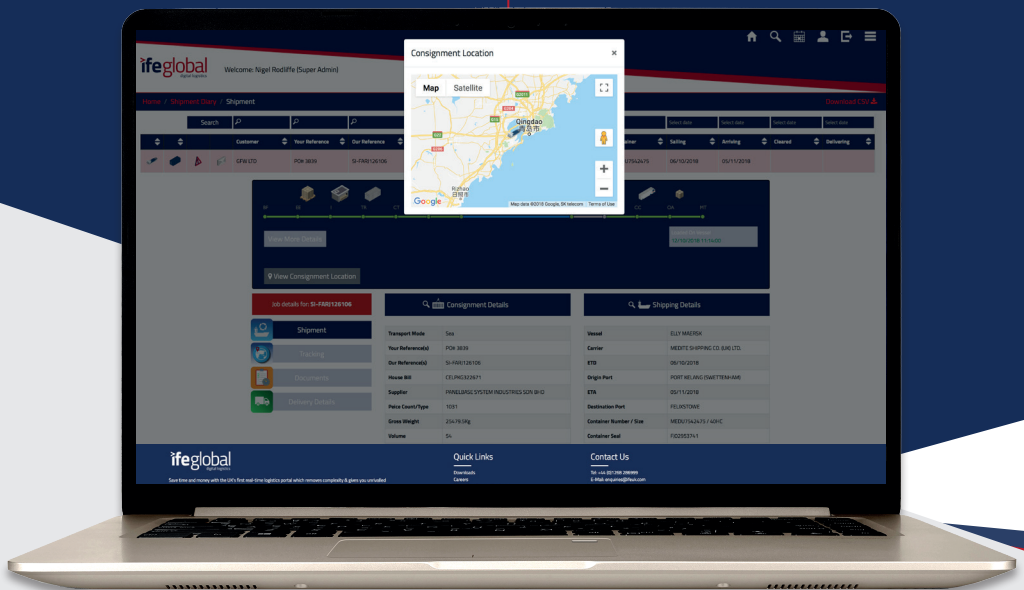

A comprehensive range of search and reporting options can help identify improvements, as well as benchmark the performance of logistics partners.
